

The Genee Registrar & GDPR

How the Genee Registrar can help with GDPR

GDPR States that you can only collect information that is necessary

Registrar allows you to disable questions you don't feel necessary for your setting, ensuring you only collect the information that is required.

Establishments must now clearly ask permission to obtain data and explain how it will be used

Registrar encourages you to show a policy page that users accept before signing in, this is customised with your policies and procedures, this will allow you to show you have met this criteria.

Data can not be stored for longer than is necessary

Registrar allows for the easy removal of visitor data that is over a certain age.

You and your Visitor Management System Vendor will need a Data Protection Officer

Genee World has a designated data protection officer who can ensure Genee systems meet GDPR requirements

Data can be exported to commonly readable formats

GDPR states that institutions must be able to provide data to individuals when requested in a commonly used machine-readable format. Genee Registrar lets you do just that.

A paper signing in book means visitor's details are visible by scanning the book

Genee Registrar means only system administrators are able to see visitor details, protecting their data. Even though you may think you aren't holding personal data, a car registration and company the visitor represents are still valuable private information.

Paper based systems have duplicate information each time a visitor is present, making it almost impossible to guarantee you have removed all reference to a visitor upon their request

Registrar stores 1 copy of a visitor and uses this for each visit until that record is removed. This means there will only ever be 1 copy of a visitor's information inside your records.
