Audience Response Systems

Pebble & IQ-Pad Handsets

Genee world audience response systems enable audiences or students to give instant feedback or answer questions posed by the presenter.

Immediate responses can be given using either dedicated wireless handsets or devices such as laptops, tablets and smartphones. These responses are analysed and presented in real time on your interactive touchscreen or whiteboard.

Questions can be created in advance or during the presentation in as few as three clicks. They can range from simple yes/no responses through multiple choice to text answers. Team-building games can be devised. The data can be displayed graphically, and thresholds can be set for minimum correct answers to give an immediate indication of where further explanation is required.

Audience response systems have been shown to increase engagement and participation in classrooms and boardrooms. The respondents' contributions can be analysed while the discussion is current, enabling the presenter and other participants to provide instant feedback.

Key Features & Benefits

Create Live Questions
The presenter / teacher can create questions before a presentation / lesson but can also add new ones in live.

Live Feedback
When the questions are answered the result will be shown live as the participants answer.

Analysis
The AR system allows for analysis to be made on all data collected in one session and saved for future reference.

ClassComm 5 Software
The IQ-Pad and the Pebble come with a copy of Genee World's ClassComm 5 audience response software.

Portable
These devices are great for larger institutions as they can be transported easily to where they are required.

Powerpoint Integration
ClassComm 5 integrates with Microsoft Powerpoint so there is no need to learn any new software to get started!
